

Micronized Maize

High quality Micronized Maize. Gelatinised starch has significantly greater susceptibility to amylase degradation than raw starch; gelatinised starch disappears at an increased rate from the rumen - both as bypass carbohydrate and due to microbial utilisation; ileal digestibility is greater than raw starch, across species, and less starch is available for hind gut fermentation.

All species benefit from increased productivity - improved growth, production and feed conversion. Micronized maize has special implications where small intestine amylase production is low (young livestock, companion animals, horses) and where hind gut production of short chain fatty acids are undesirable.

Suitable for all diets. Recommended for high performance diets and young animal diets. Suitable for horses. Suitable for companion animals/ small pets etc.

Typical Analysis

Fresh Weight (%)	
Dry Matter	86
Moisture	14
Protein	8.5
Oil	3.8
Fibre	2
Ash	1.3

Energy Levels (MJ/Kg)	
Ruminant (ME)	14.5
Poultry (ME)	14.8
Pig (DE)	15.6

NOTE: Whilst every effort is made to ensure the accuracy of this document, the information provided is meant as a guideline only.

Suitable For

Cattle, Sheep, Pig, Equine, Dog, Small Pet, Wild Bird, Poultry

Available Formats

Flaked, Ground, Blend, Whole

Packaging

25kg bag
I.B.C. Tote 500kg - 1,000kg
Bulk: Blown or Tipped
